

**MEMORANDUM**

**Highway  
Department**

Jason Benson, P.E.  
County Engineer

Thomas B. Soucy, P.E.  
Deputy County Engineer

Blaine Laaveg  
Superintendent

TO: Cass County Commission  
FROM: Jason Benson, County Engineer *JPB*  
DATE: February 27, 2023  
SUBJECT: Consent Agenda Topic for March 6, 2023 Meeting:  
Spring Load Restrictions on County Highways

---

I would like to impose spring weight restrictions on Cass County Highways on, or after March 15, 2023, depending on the weather. I've enclosed a resolution and map with the proposed spring load restriction postings. The criteria used for pavements was the pavement condition and area served. Most small towns have one unrestricted road access.

Gravel roads are posted at a 6 Ton restriction. The exception is a section of County 11 west of Grandin. We have also changed the gravel portions of County Road 13, 20, and 22 to an 8 Ton restriction due to the recent load posting of the bridge over the Rush River on County Road 22.

**SUGGESTED MOTION: Adopt resolution implementing spring load restrictions on or after March 15, 2023, as determined by the county engineer.**

RESOLUTION #2023-3  
RESOLUTION TO IMPLEMENT SPRING LOAD RESTRICTIONS  
ON COUNTY HIGHWAYS

WHEREAS: Soft base conditions experienced during spring thaw reduce the load carrying capacity of County Highways;

WHEREAS: The Cass County Board of Commissioners desires to prevent serious damage to County Highways;

WHEREAS: 39-12-03 of the North Dakota Century Code authorizes local authorities to impose vehicle weight restrictions on County Highways;

NOW THEREFORE: Be it resolved by the Cass County Board of Commissioners that spring load restrictions will be imposed upon Cass County Highways in the following manner: All County Highways to be posted in accordance with the Cass County 2023 Spring Load Restriction Map dated February 27, 2023. Spring load restrictions will be effective at 12:01 AM on or after March 15, 2023, as determined by the County Engineer.

Dated this 6th day of March 2023.

APPROVED:

Cass County Auditor

## CASS COUNTY SPRING LOAD RESTRICTIONS

Cass County will impose Load Restrictions on all Highways effective on or after March 15, 2023. Restrictions shall remain in effect until pavement subgrade conditions warrant removal, generally about the 15<sup>th</sup> of May.

Additional information is available at [www.casscountynd.gov](http://www.casscountynd.gov) or at the Cass County Highway Department at 298-2370.

---

### CASS COUNTY HIGHWAY DEPARTMENT SPRING LOAD RESTRICTION POLICY

Under authority of NDCC §39-12-03, local authorities may restrict loads on their highways. The purpose of the load restrictions is to protect the highways from break-up during the spring thaw. Restrictions may be placed at other times during the year to protect highways with weak surfaces from load damage. The following tables list the Cass County Spring Load Restrictions. These restrictions are subject to change as conditions warrant. Actual load restriction postings take precedence over those listed here and are in effect when the load restriction signing is in place.

It is the Department's position to not implement Spring Load Restrictions any earlier than necessary. The Department monitors the daily high/low temperatures, which are used to calculate accumulated Freeze and Thaw Indexes. From these indexes, highway engineers can determine when to implement and remove load restrictions.

Be aware that this method is only one decision tool the Department uses to determine when to implement and remove load restrictions. The Department still relies heavily on the existing highway conditions and past experience of its field personnel when making the final decision of when to implement and remove load restrictions.

Implementation and removal of Spring Load Limit Restrictions is highly dependent on weather. It is the Department's desire to protect its roads while minimizing the period the roads are restricted. The implementation and removal dates for the Spring Load Limit Restrictions are determined based on recommendations from field personnel and the Thaw Index. The Thaw Index is the average daily temperature as compared to a temperature of 29 degrees F. Anytime the average daily temperature exceeds 29 degrees F. we feel we have a thawing day. For example, if a day's high and low temperatures are 42 degrees F. and 20 degrees F. respectively, then the average temperature for the day is 31 degrees F ( $(20+42)/2=31$ ). When we compare the day's average temperature of 31 to the previous referenced 29 we find we have 2 degree days of thawing taking place for that day. We monitor these temperatures daily and accumulate the amount of thawing degree days taking place. When the amount of accumulated thawing degree days approaches 25 to 50 degree days, we feel enough thawing has taken place to warrant implementing the spring load restrictions.
